

EOSC Coordination meeting – Breakout session #2

Broadening the adoption and uptake of project results by scientific communities and beyond.

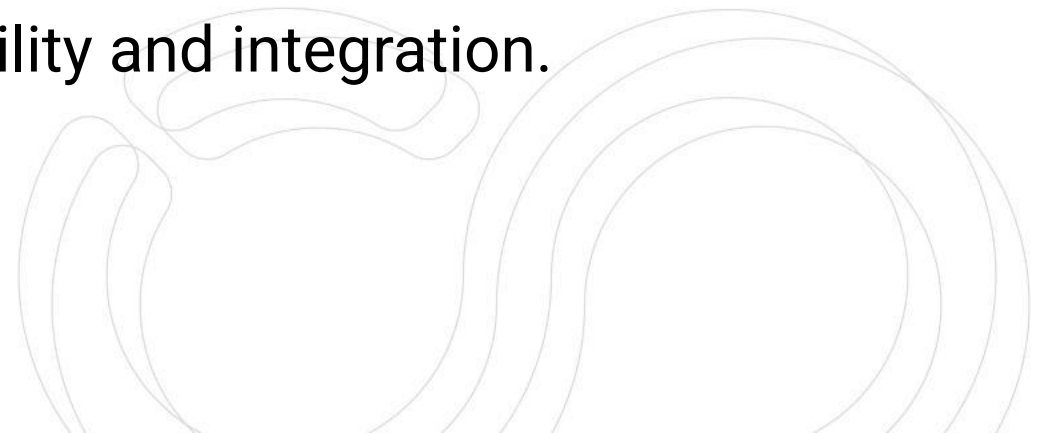

RAISE & RAISE Suite. Evdokimos Konstantinidis

- **Target group:** Researchers who are not sharing their data.
- It's about users, not technology and users need **to feel safe!**
- **Trust is built** by offering a peer-to-peer access.
- Get advice from investors, they can give **valuable feedback.**
- Use **external stakeholders** for testing.
- Put in place a **safe environment:** results produced with data provided by other organisations must be approved by the data owner before they can be received and used.

AI4EOSC. Alvaro López-García

Motto: **Platforms need to adapt to users, not users to platforms!**

- Interoperability at technical and semantic level
 - Make things work together, but try to be transparent for users (i.e. deliver results)
- Easy platforms, easy access, easy usage
 - Who are your users? Hide complexity for them, give them the functionality (and information) they want.
- Platform customisation, adaptability and integration.

eosc Commonalities & key discussion points

- Identify your target audience, either within EOSC or beyond EOSC, e.g. specific scientific community.
- Identify early enough which project's outcomes (aka products) are worth sustaining beyond the project lifetime ...
 - ... considering they have users
 - ... taking into account potential sources of funding, including innovation mechanisms, e.g. create a start-up, find investors, or get national funding.
- **Work-out the user experience to ensure functionality over technical details are clear to users.**
